### LabConnect Expands North American Headquarters in Seattle

**(Seattle; May 8, 2013)** – The success of [LabConnect's](#) Scientific Operations Support (SciOps) team and overall company growth are behind its move to larger quarters in Seattle's historic district.

"We needed to expand because we are growing," said LabConnect President and Chief Executive Officer Eric Hayashi. "But beyond the additional space needed for our core office functions, we wanted to create just-in-time space for our growing SciOps team members who spend most of their time off site with clients. This move will give us room to double our capacity and allow us to better serve our clients."

LabConnect provides central laboratory testing services to the biopharmaceutical industry through a [global network](#) of regional and local laboratories. The SciOps team is a special unit comprised of industry experts with a minimum of 10 years of experience who offer short- or long-term functional outsourcing services for pharmaceutical research.

"Our customers want to focus on getting the job done well, not on the human resources aspects," Hayashi said. "We help with both. We provide experienced research professionals and take care of all the details such as payroll and benefits. Demand for this service has been strong since the beginning and it is still growing."

LabConnect's new headquarters is in Seattle's historic Mutual Life Building at 605 First Ave., Ste. 300. Contact LabConnect at 206-322-4680 or by email at [info@labconnectllc.com](mailto:info@labconnectllc.com).

#### **About LabConnect, LLC**

Privately held [LabConnect, LLC](#), provides global central laboratory testing services to the biopharmaceutical industry to support drug development programs around the world. LabConnect's capabilities include a full range of routine and specialized testing, safety, esoteric, bioanalytical, pathology and biostorage and logistics services.
