

SampleGISTICS™

LabConnect provides an integrated solution to the new world of clinical trials — as science evolves, we're evolving the technology to support it.

KEY FEATURES

- Real-time tracking from the point of collection
- Virtual accessioning for immediate identification and faster resolution of queries/issues
- Increased control of shipping logistics and costs
- Multiple-user web access
- Customizable reports
- Chain-of-custody tracking increases sample integrity
- Sample data integration

TECHNOLOGY

- Digital pen captures data at the point of collection
- 21 CFR Part 11 compliant, data-capture software and forms
- Customized sample tracking interface

Sample tracking without borders.

Increasingly complex biomarker and other specialized testing requirements present a significant challenge to sample testing, logistics and storage. Drug development today requires a comprehensive real-time grasp of exactly what samples you have, where they are and how they are collected, shipped, processed and stored.

LabConnect's real-time tracking service follows your specimen samples from collection through logistics to receipt at any lab or storage location in the world. You not only have enhanced visibility of each individual sample, you get an advanced virtual accessioning process and immediate query resolution, improving efficiencies to help save you time and money.

Improved sample tracking reduces the time from collection to analysis and enhances security and integrity of the sample throughout its life span. LabConnect provides an integrated solution to the new world of clinical trials — as science evolves, we're evolving the technology to support it.

SampleGISTICS™ (cont.)

LabConnect's sample tracking database lets you know where each sample is in real time, from the investigator site, during transit and after arrival at the lab.

CASE STUDY

A LabConnect client needed questions answered about his samples to make decisions regarding the company's protocol.

Issue

The existing central laboratory could not answer his questions:

- How many samples are available of all 13 sample types?
- How are the samples distributed between the six lab locations?
- How has each sample been processed?
- What percentage of samples have been analyzed by the six locations?
- Where is the data from the six different labs?

Solution

LabConnect's sample tracking database lets you know where each sample is in real-time, from the investigator site, during transit and after arrival at the lab. Because samples are assigned a unique number during accessioning, a comprehensive set of data can be associated with each sample, including:

- Date and time collected, received, analyzed
- Dosage
- Indication
- Tumor type
- Volume
- Freeze/thaw cycles
- Processing conditions
- Storage conditions
- Results

ABOUT LABCONNECT

Founded in 2002, LabConnect provides global central laboratory services including routine and esoteric laboratory testing, kit building, sample management, biorepository and scientific support services for biopharmaceutical and CRO clients. LabConnect's unique combination of state-of-the-art technology, world-class laboratories, easy access to emerging markets and extensive specialized testing expertise means the drug development industry can rely on a single provider for all of their central laboratory service needs.
